Presentation on Capstone Project Execution (CPE–316004)

Topic	Songir Handcraft Utensil Portal.	
Presented by	1. Jidnyasa Govind kasar.	
	2. Nandini Jitendra Pardeshi.	
	3. Jagruti Chandrakant patil.	
	4. Tanu kiran Sanyasi.	
Guided by	Ms. Ratna patil	
Semester	**Sixth (K Scheme)**	**Date :**

Abstract

The Songir Handcrafted Brass & Copper Utensils Portal is an online platform developed to promote the traditional utensil artisans of Songir village in Dhule district. These handcrafted utensils are mostly sold through local markets, which limits their reach to nearby customers.

The system provides a centralized digital marketplace where multiple shopkeepers can showcase their products, allowing customers to explore, compare utensils, and send custom or bulk order requests.

The main objective is to increase digital visibility of local artisans, expand customer reach, and support traditional craftsmanship through a user-friendly online platform.

1. Introduction

- Songir village in Dhule district is famous for its traditional handcrafted brass and copper utensils made by skilled local artisans. These utensils are an important part of the region's cultural and economic heritage. However, most products are sold only through local markets, which limits their reach to nearby customers.
- To solve this problem, the **Songir Handcrafted Utensils Portal** is developed. This platform allows multiple shopkeepers to showcase their utensils online, enabling customers to easily explore and compare products. The main objective of the system is to digitize the traditional utensil marketplace and connect local artisans with a wider customer base through a user-friendly online platform.

2. Literature Review

- Songir village in Dhule district is famous for traditional handcrafted **brass and copper utensils** made by skilled artisans.
- These utensils are mainly sold through **local markets and physical shops**, which limits their reach to nearby customers.
- Due to the **lack of a digital platform**, many potential buyers cannot discover these authentic handcrafted products.
- Customers often need **product comparison and information** before purchasing, which is difficult in the traditional market.
- The **Songir Handcrafted Brass & Copper Utensils Portal** provides a **centralized online marketplace** for showcasing and exploring utensils.
- This platform helps **connect local artisans with a wider customer base** through an easy-to-use digital system.

3. Scope of the project

- The scope of this project is to develop an online platform for Songir handcrafted brass and copper utensils, helping local shopkeepers promote their traditional products digitally.
- The system allows multiple shopkeepers to register their shops and display utensils online, enabling customers to explore and compare products from different shops and send custom or bulk order requests
- The project mainly focuses on providing digital visibility to local artisans and improving customer accessibility to traditional utensils. However, advanced features such as online payment integration, order tracking, and delivery management are beyond the current scope and may be included in future enhancements.

4. Methodology

- The development of the **Songir Handcrafted Brass & Copper Utensils Portal** follows a structured **Software Development Life Cycle (SDLC)** approach for systematic planning and implementation.
- **Requirement analysis** was conducted by studying the traditional utensil market of Songir and understanding the needs of shopkeepers and customers.
- Based on these requirements, the **system design** was planned by defining user roles such as customer, shopkeeper, and admin along with the overall architecture.
- The system was developed as a **web-based platform** where shopkeepers can register their shops, display utensils, and customers can explore products and send quote requests.

4. Methodology

- **3. Development:**

  The frontend was developed using React for interactive user interface design. Backend APIs were created using Node.js and Express, and MongoDB was used for storing user, product, and quote request data.

- **4. Integration & Testing:**

  All modules were integrated and tested for functionality, navigation flow, user authentication, and role-based access control.

- **5. Evaluation:**

  The system was evaluated based on usability, responsiveness, and its effectiveness in supporting local utensil artisans digitally.

5. Details of designs, working & processes

- Overall Architecture Design:
- Project follows **3-Tier Architecture**:

Presentation Layer (Frontend)	Database Layer (MongoDB)	Application Layer (Backend)
• User Interface (Customer / Shopkeeper / Admin) • Product display pages • Forms for login, registration, quote request	• Stores user data • Stores product details • Stores quote requests • Stores admin records • Stores shops records	• Business logic handling • Role-based authentication • Quote request processing • Product management • Shop management

7. Conclusion and future scope

- The **Songir Handcrafted Brass & Copper Utensils Online Marketplace** is developed to support the traditional utensil artisans of Songir by providing a digital platform to showcase their shops and products. Through this system, customers can explore different utensil shops, view handcrafted products, and send quote requests according to their requirements. This helps customers easily discover authentic utensils and connect with multiple shopkeepers in one place.
- The platform also includes an **"Add My Shop" functionality**, which allows utensil artisans or shopkeepers from Songir to register their shops and display their handcrafted utensils online.

7. Conclusion and future scope

- This feature helps local businesses increase their visibility and reach more customers beyond their physical location
- The future, the system can be improved by adding features such as online payment integration, order tracking. The platform can also be expanded to include more artisans, improved product catalogs, and better communication tools between customers and shopkeepers. These improvements will further strengthen the digital presence of Songir utensil artisans and help promote traditional craftsmanship on a larger scale.
