Presentation on Capstone Project Execution (CPE–316004)

Topic	Civic Issues Reporting and Solution System	
Presented by	1. Rohit Dilip Khairnar	
	2.Kalyani Mahesh Patil	
	3.Darshan Atul Shirsath	
	4.Rohan Pramod Sonawane	
Guided by	Mr. C. P. Bhamare	
Semester	**Sixth (K Scheme)**	**Date :**

Abstract

- The Online **Local Problem Reporting System** is a web-based platform developed to help citizens report civic problems in their local areas quickly and easily.
- In many cities, people face problems such as damaged roads, water leakage, garbage accumulation, electricity faults, and broken streetlights. Many of these problems remain unresolved because there is no proper complaint management system.
- This system provides a centralized platform where citizens can submit complaints, upload images as proof, and track the status of their complaints.
- The system forwards complaints to the respective departments, enabling faster problem resolution and improving communication between citizens and authorities.

Content

1. Introduction (background of the industry or used based problem / task)
2. Literature Survey
3. Scope of the project
4. Methodology
5. Details of designs, working and processes
6. Results and applications
7. Conclusion and future scope
8. References and Bibliography

1. Introduction

- The Local Problem Reporting and Solutions System is a web-based platform designed to help citizens report problems in their local area easily and quickly.
- In many cities and towns, people face issues such as damaged roads, water leakage, garbage accumulation, broken streetlights, and electricity problems.
- Usually, citizens do not know the correct department to contact or the complaint process takes a long time. Because of this, many local problems remain unresolved.
- This system provides a simple online solution where citizens can report problems directly through a website.

2. Literature Review

- Several digital platforms have been developed to manage public complaints and civic issues.
- Applications like swachhata App and grievance systems allow citizens to submit complaints online.
- These systems reduce the need for manual paperwork and office visits.
- They also provide complaint tracking and status updates.
- However, many systems still lack efficient communication and proper complaint management.

2.1 Problem Definition

- In many local areas, citizens face problems such as **water supply issues, electricity failures, drainage blockage, road damage, garbage collection problems, and street light failures**. Currently, most complaints are registered through **manual methods** like visiting municipal offices or submitting written applications.
- Due to the **manual complaint handling system**, it becomes difficult for authorities to manage a large number of complaints efficiently. Citizens also face problems in **tracking the status of their complaints**, which leads to frustration and lack of transparency.

2.2 Advantages & Disadvantages

Advantages:

- The existing system is simple and easy to use because it mostly depends on manual processes.
- Citizens can directly communicate with municipal officers while submitting complaints.
- It does not require internet or digital devices, so it can be used by anyone.
- The system is low cost because it does not require special software or technology.

2.2 Advantages & Disadvantages

Disadvantages:

- The complaint registration process is slow and time consuming because it is done manually.
- Citizens often need to visit the municipal office to submit or check complaints.
- Complaint records are maintained in registers or paper files, which can be lost or damaged.
- There is no proper complaint tracking system, so citizens cannot easily check the status.
- It becomes difficult to manage a large number of complaints.
- Generating reports and analyzing data is difficult in the manual system.
- Lack of transparency may cause delays in complaint resolution.

3. Scope of the project

Complaint Management Requirements:

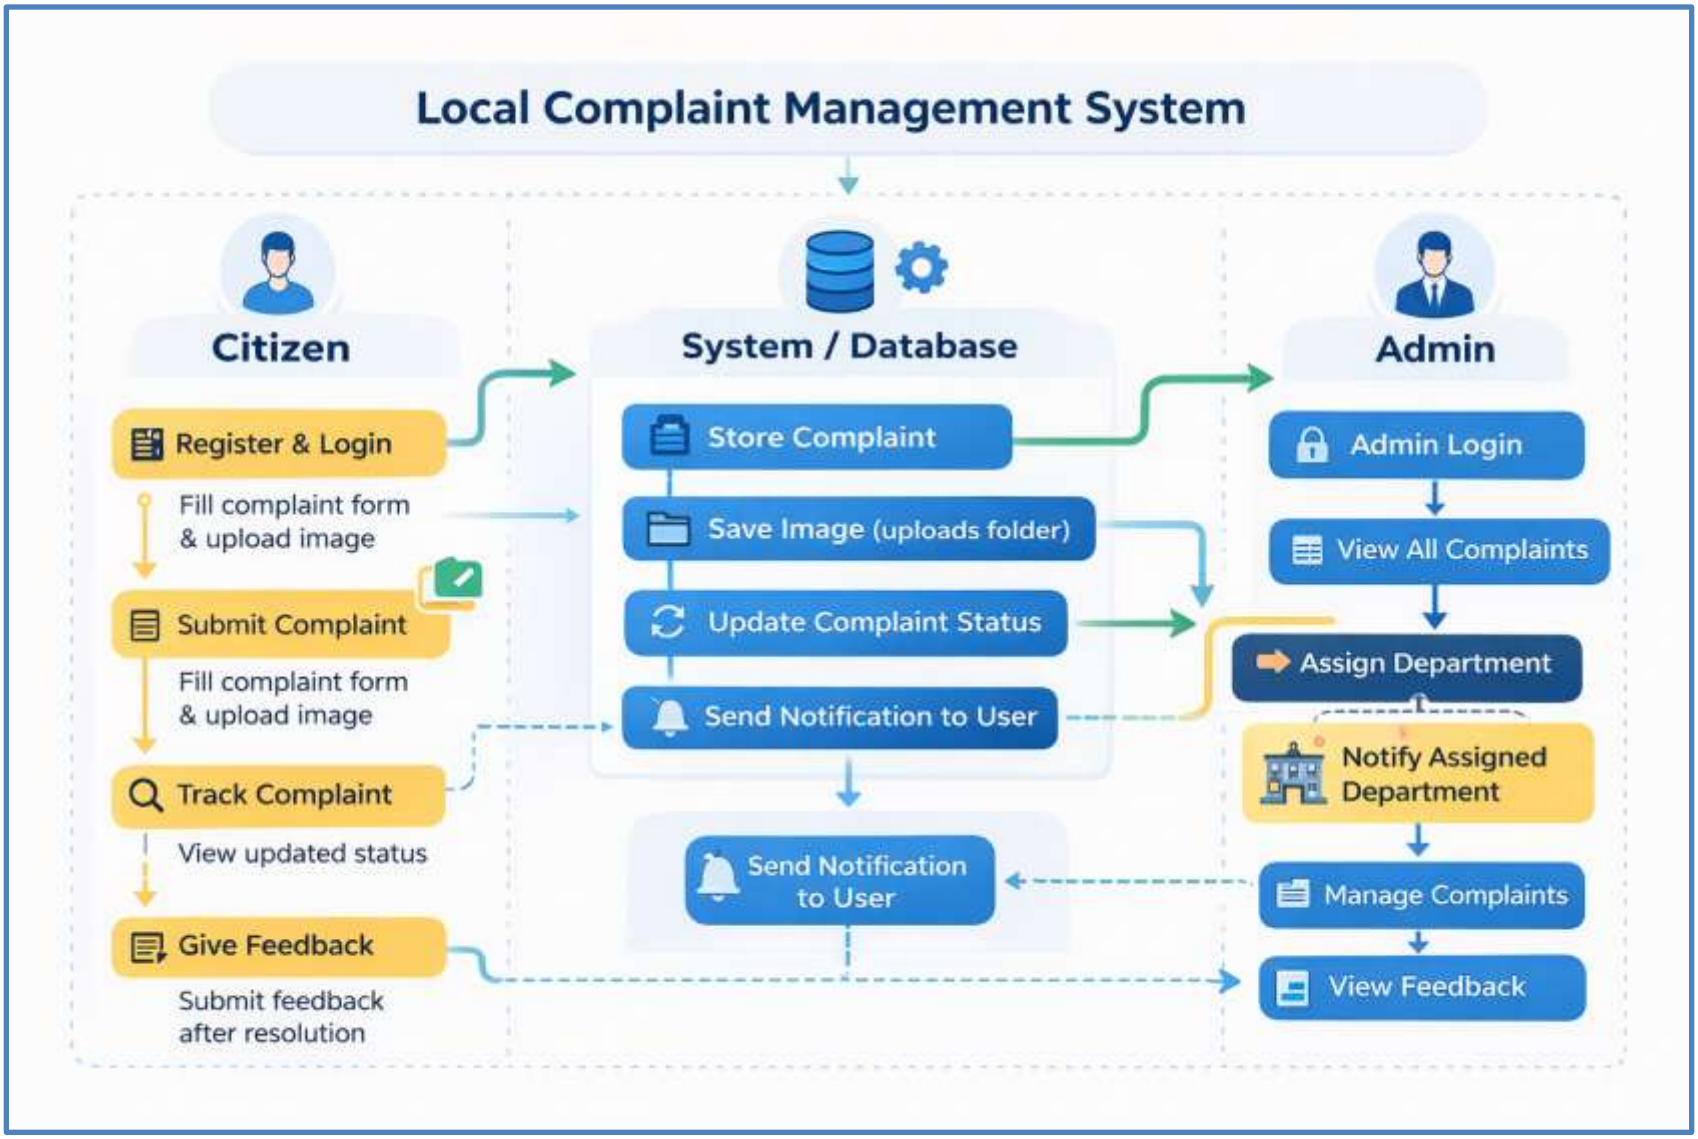
- The system should allow citizens to register and submit complaints online.
- The system should store complaint information such as complaint type, description, location, and image.
- The system should categorize complaints based on departments like electricity, water supply, drainage, road maintenance, and sanitation.
- The system should allow the admin to manage and update complaints efficiently.
- The system should provide real-time complaint status tracking for citizens.
- The system should maintain a complete record of complaints and their resolution.
- The system should generate reports of complaints based on date, department, and status.
- The system should help improve communication between citizens and local authorities.

4. Methodology

- **The system works through the following steps:**

1. User registers and logs into the system
2. User submits complaint with details and image
3. Complaint is stored in the database
4. Admin verifies the complaint
5. Complaint is forwarded to the responsible department
6. Department resolves the issue
7. Complaint status is updated in the system
8. User can track complaint status online

4. Methodology

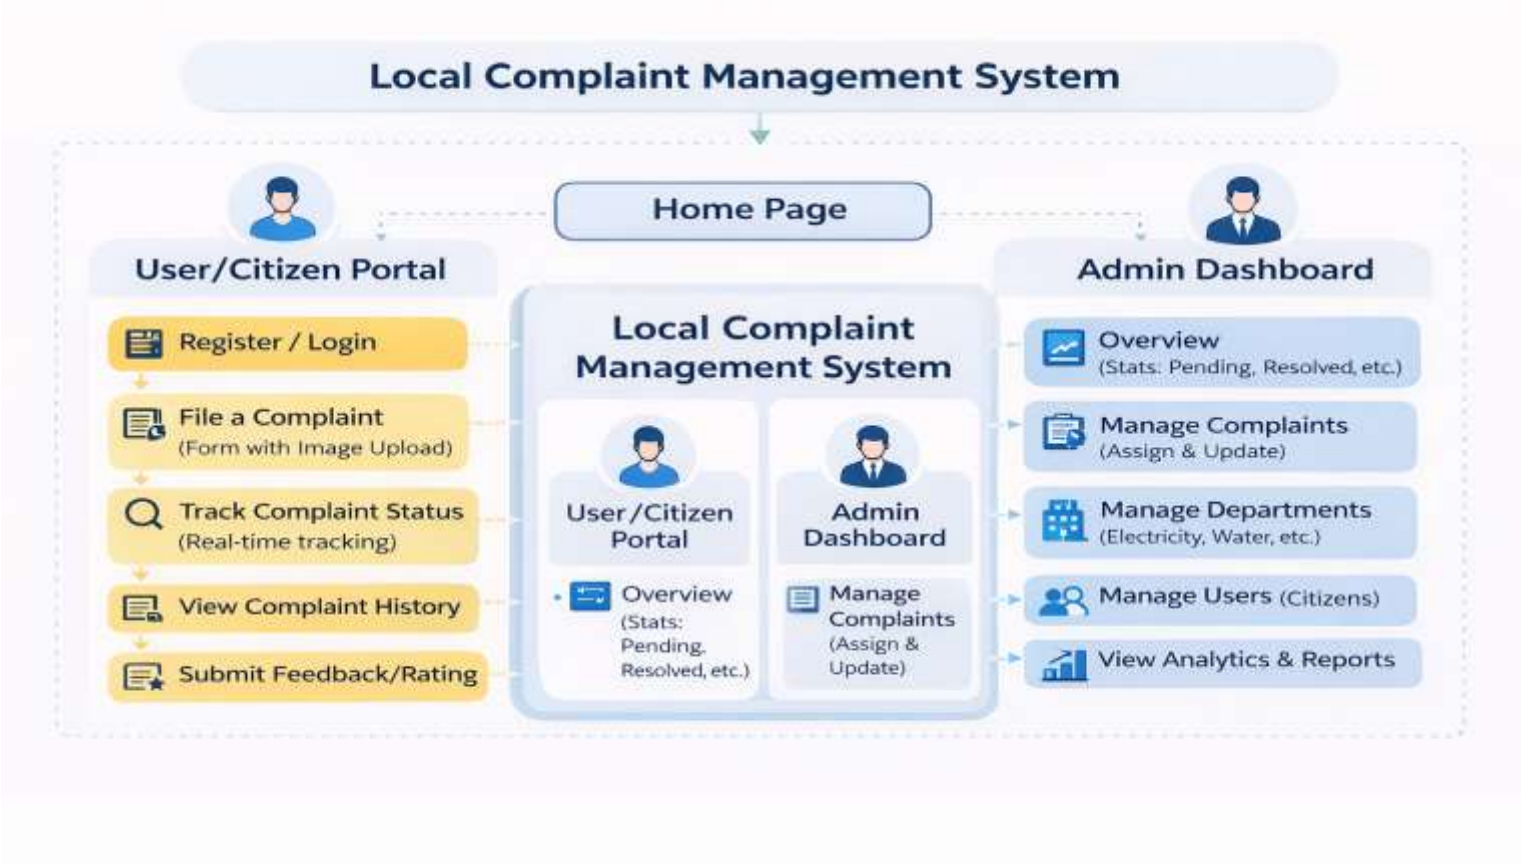


5. Details of designs, working & processes

- **The system is developed using modern web technologies.**
- **Frontend Technology**
  - React JS
  - HTML
  - CSS
  - JavaScript
- **Backend Technology**
  - Node.js
  - Express.js
- **Database**
  - MongoDB
- **System Modules**
  - User Module
  - Admin Module

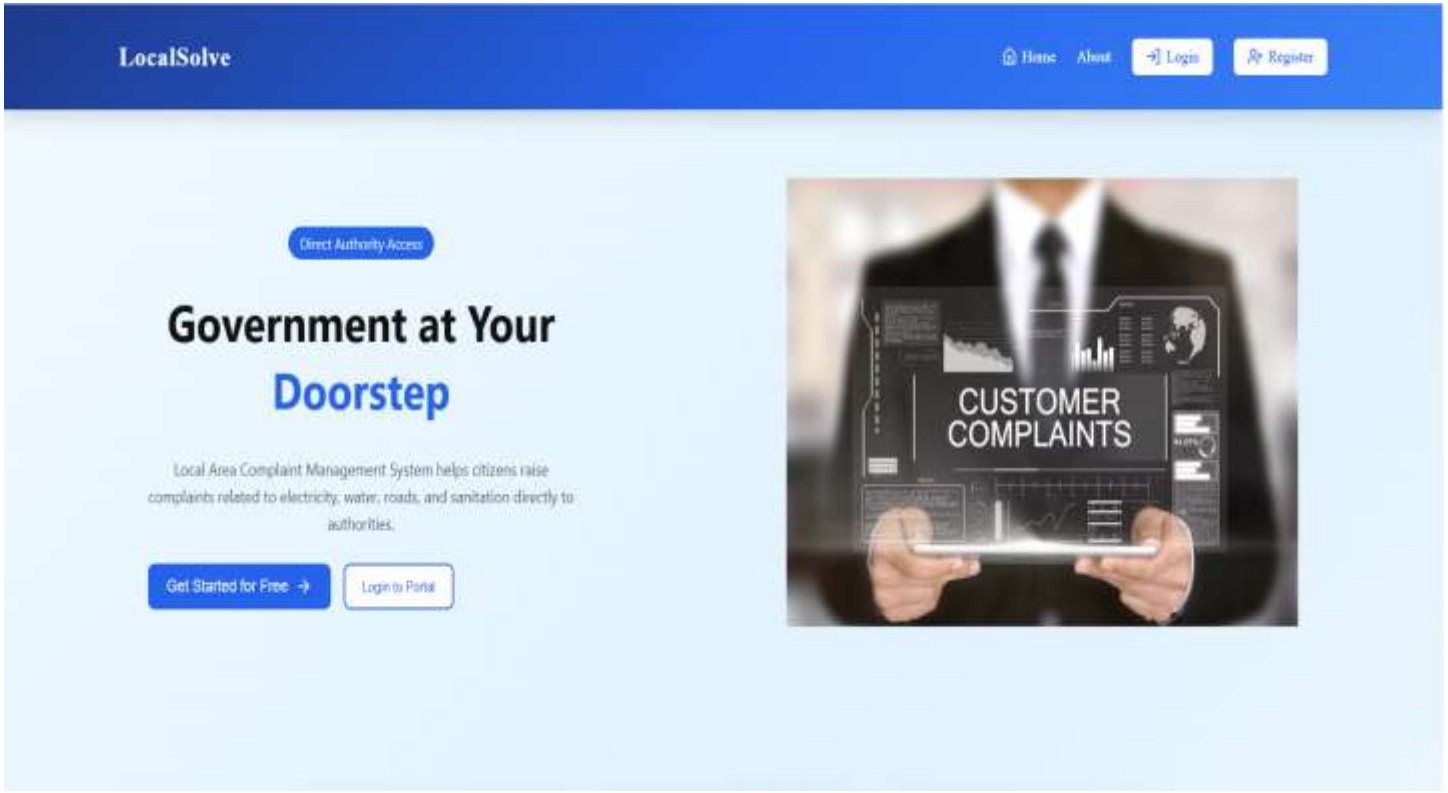
5. Details of designs, working & processes

- Working



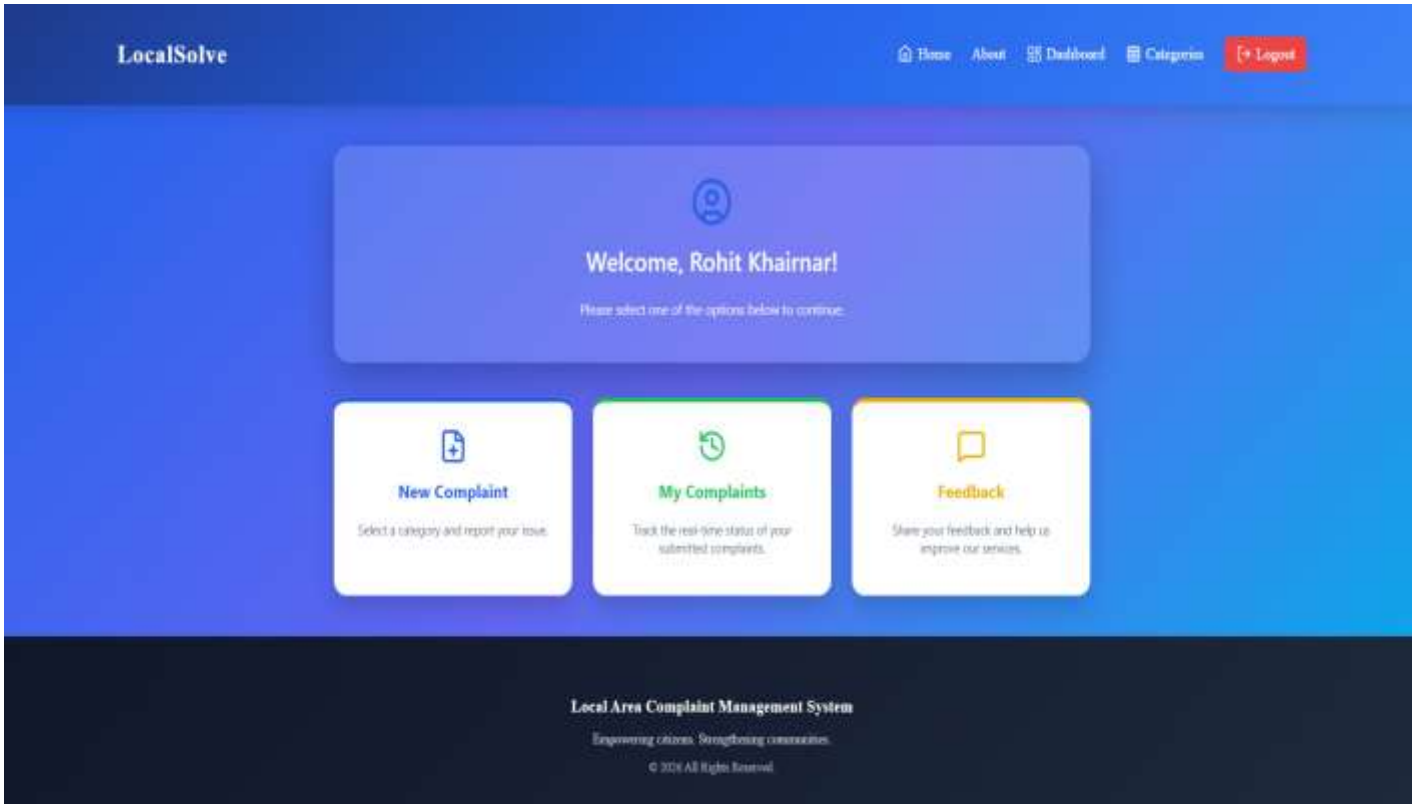
6. Results and Applications

- Home Page



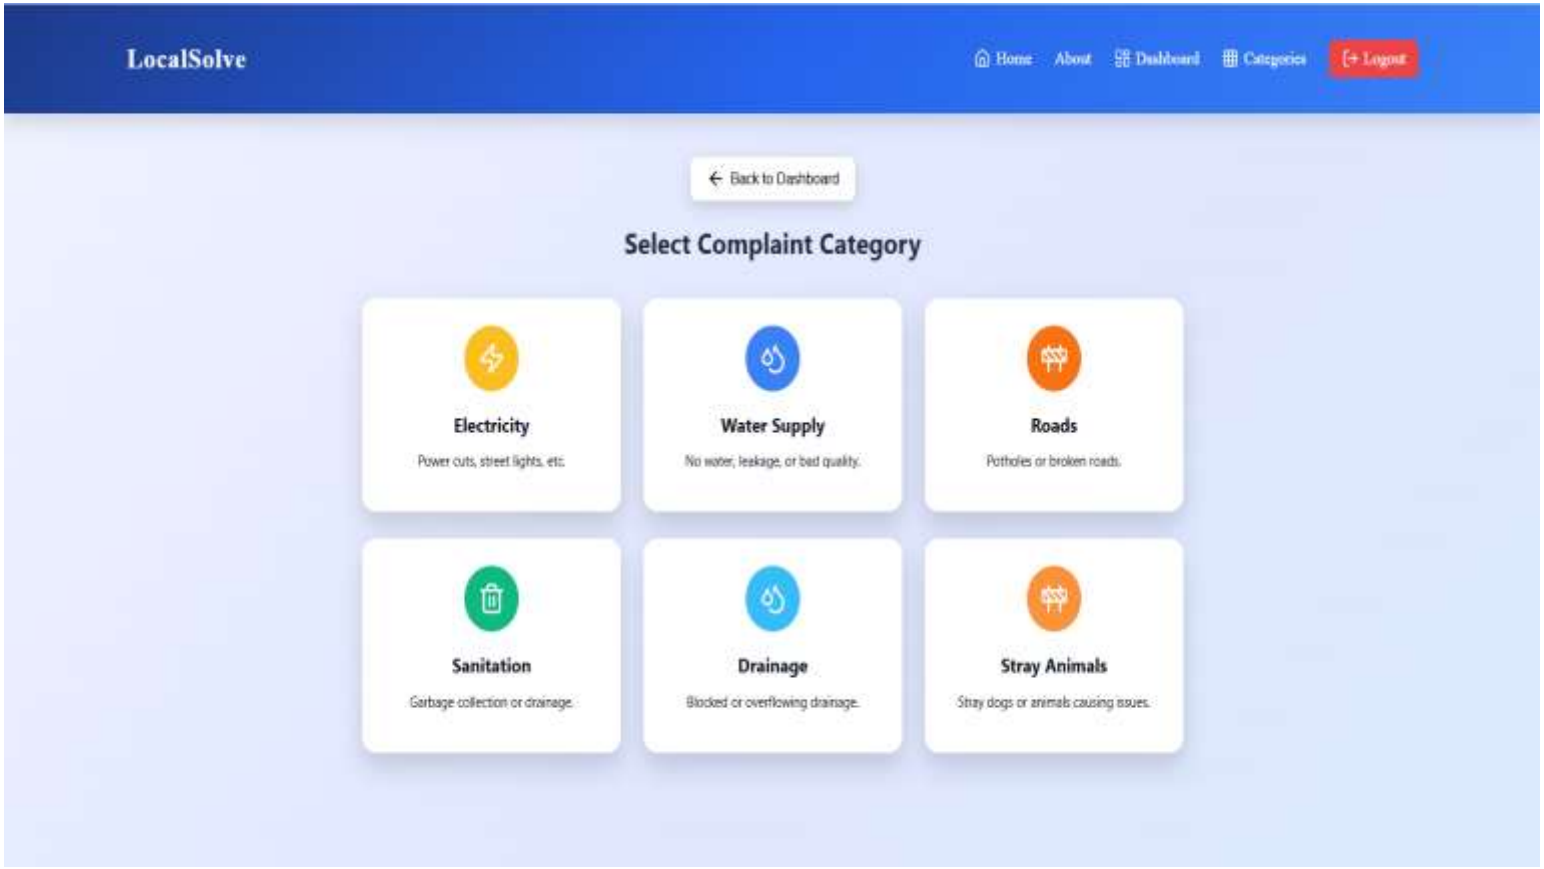
6. Results and Applications

- Citizen Dashboard



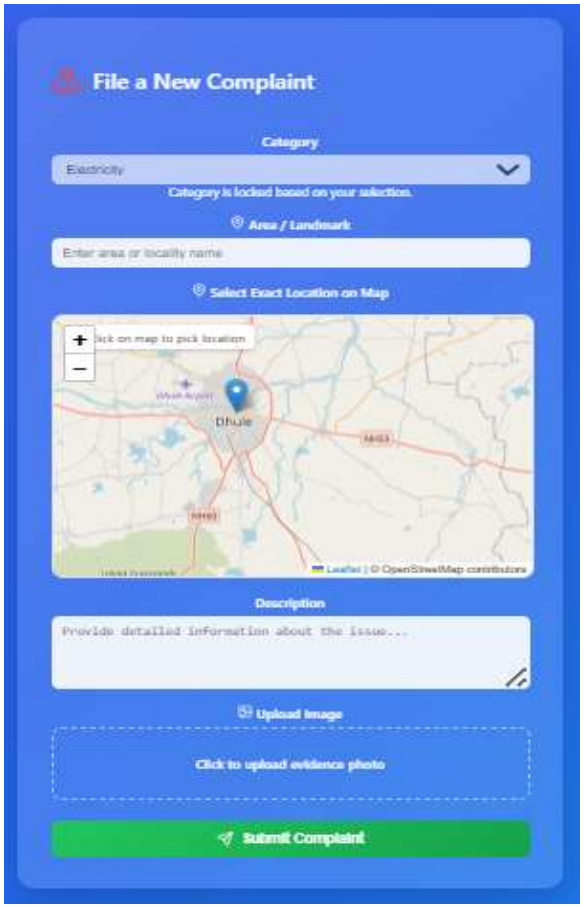
6. Results and Applications

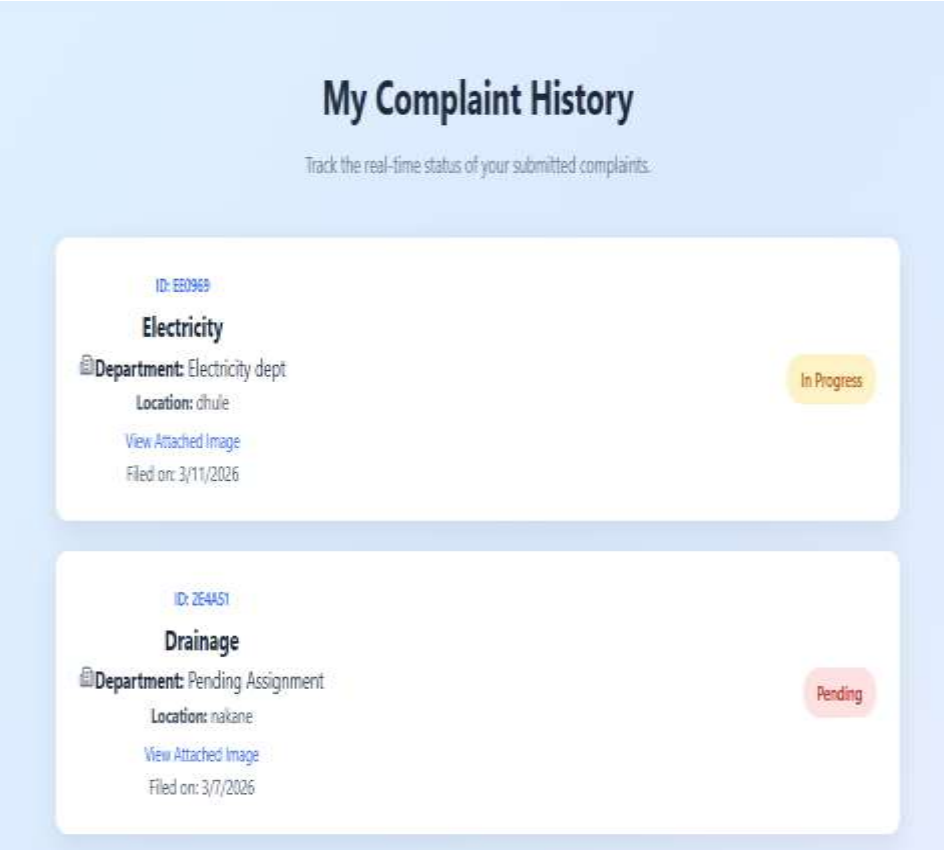
- Category Page



6. Results and Applications

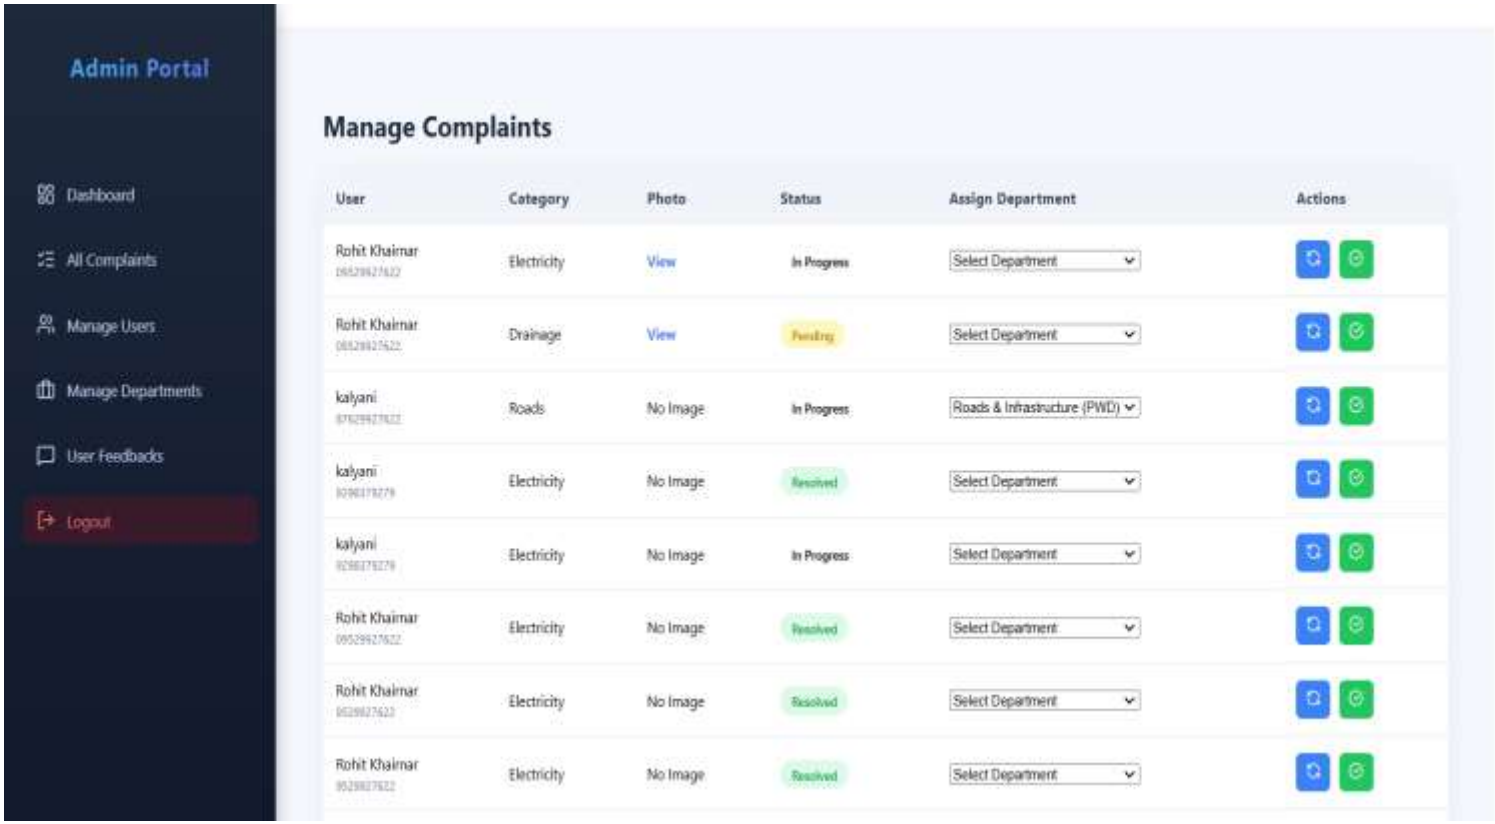
- Complaint Form & Complaint History





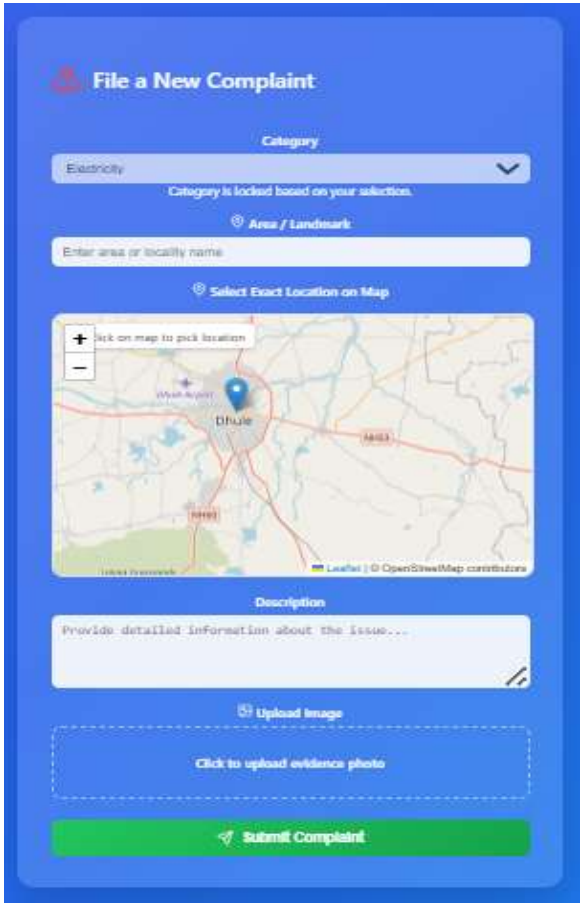
6. Results and Applications

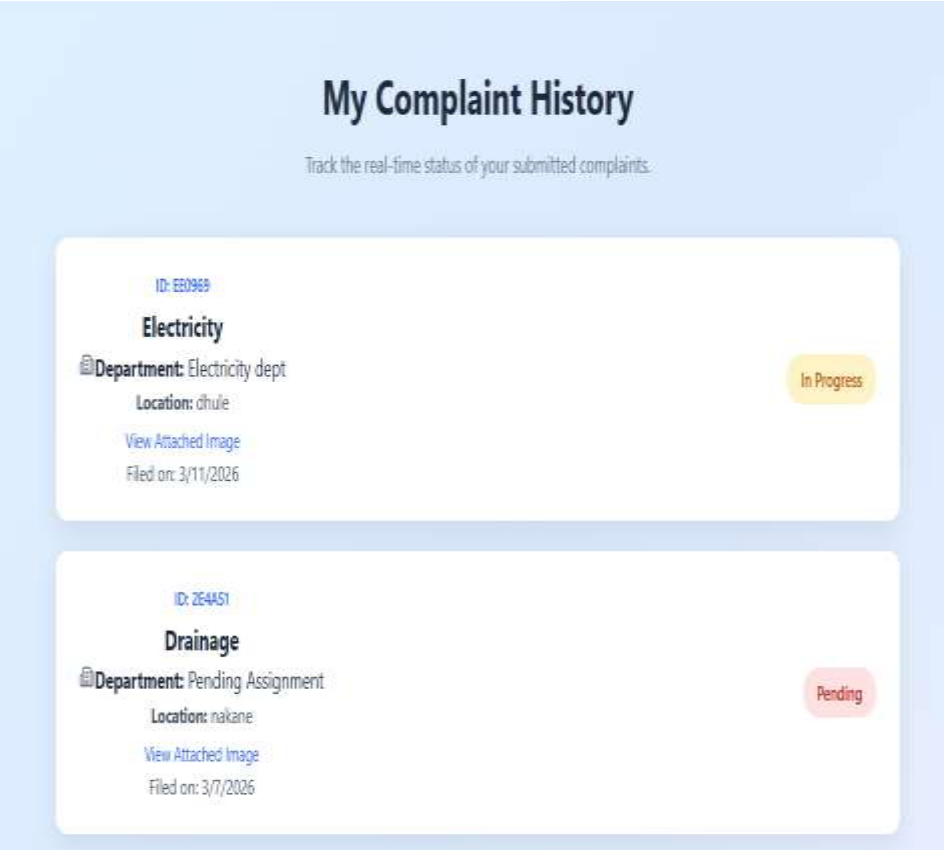
- Admin Portal



6. Results and Applications

- Complaint Form & Complaint History





7. Conclusion

- The Online Local Problem Reporting System helps citizens report local issues in a simple and organized way.
- This system reduces the need for manual complaint handling and provides a digital platform where problems can be recorded and monitored easily.
- Through this system, authorities can track complaints, manage them efficiently, and ensure that issues are resolved in a systematic manner.
- Overall, the system improves public service management and helps create a cleaner and better managed local environment

7.future scope

- Adding a department dashboard for different government departments to manage complaints directly
- Implementing priority-based complaint handling for urgent problems
- Adding a rating system where users can rate the service after problem resolution
- Integration with map services to visualize problem locations
- Using data analytics to identify frequently occurring problems in specific areas
