Acknowledgment

We would like to express our sincerest gratitude to all people who have contribute towards our project. We would like to extent our heartiest thanks to the Head of Computer Department, our mentor Mr. A. V. Agrawal Sir and subject teacher Mr. N. D. Patel sir for their important guidance, help and advice which was really important for our overall capstone project.

Also we would like to extent our thanks to all faculty of our department and all our colleagues who helped us in completion of the project.

Abstract

The proposed system is “Rural E-Commerce And Logistics System”. It is a web application. In rural areas, artisans face difficulty in selling their products due to lack of proper market access, poor transportation facilities, and dependency on middlemen. This system acts as a digital platform designed for artisans, customers, and administrators by creating an environment to buy and sell products easily. The system makes it simple to manage product listing, order placement, and delivery processes. The primary goal is to streamline the complete selling process from product upload to final delivery while reducing manual efforts and traditional barriers. The system includes three modules: Admin, User, and Artisan, and provides features such as product management, order tracking, and logistics support. It also allows monitoring of different stages like product listing, ordering, dispatch, and delivery. The system ensures proper management of data and provides a user-friendly interface so that all users can easily access and perform their activities. Overall, it helps in promoting digital inclusion, improving rural employment, and supporting the growth of rural businesses.
