Acknowledgement

We would like to express our sincere gratitude to everyone who supported and guided us in completing our project on “Site Material Management System.”

First and foremost, we express our heartfelt thanks to our respected Head of Department, Mr. N. D. Patel, for his constant encouragement and support. His guidance helped us to complete this project successfully.

We would also like to express our deep gratitude to our project mentor, Ms. Ratna Patil, for her valuable guidance, suggestions, and continuous supervision throughout the project. Her support and motivation played an important role in the successful completion of this work.

We, Ms Sharadha S. Hajari, would like to extend our thanks to all the faculty members of our department for their support and encouragement during this project.

Finally, we express our sincere thanks to our parents, friends, and all those who directly or indirectly helped us in completing this project successfully

Your sincerely,

Tanushree Parag Ahire

Yashika Paresh Chaudhari

Abstract

The Site Material Management System is a web-based application designed to efficiently manage and monitor construction materials across different sites. The primary objective of this system is to provide a centralized platform where supervisors and administrators can track material availability, raise requests, and manage allocation in a structured and organized manner.

The system enables users to view available materials, send material requests, and monitor their status in real time. It also provides features such as site selection, role-based access, and usage tracking, ensuring that materials are properly distributed and utilized. By maintaining accurate records of material flow, the system helps reduce wastage and improves operational efficiency.

This project aims to digitize the manual process of material management, enhance transparency, and improve communication between site supervisors and administrators. By integrating modern web technologies with construction site operations, the system ensures better resource management, time efficiency, and overall productivity in construction projects
